GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

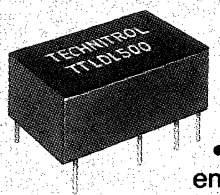
Circuit timing.

Why adjust it when you can perfect it?



Let's say you've just designed the fastest, tightest digital circuit you've ever seen. But it needs a super delay line to tie into your overall scheme. Something special. Certainly high-performance.

You need Technitrol. For leading- or trailing-edge timing of any logic-based circuit.

• Only Technitrol can give you a selection of lumped-constant active delay lines with 5 ns to 2000 ns delay times that are ±1 ns or ±1% repeatable over −55° to +125°C, at rated voltage input ±10%. That's full voltage and temperature compensation!

(We aren't just telling you they perform this well—we'll put it on the part if you wish.)

• Our programmable delay lines, up to 100k ECL, give you a selection of up to 15 different delay times per module, differing by as little as 500 ps.

• Technitrol chip-carrier delay modules enable tighter board stacking and the use of vapor-phase reflow technology.

If you're really serious about quality and performance, you'll appreciate our meticulously balanced designs that produce consistent lows and highs for both positive- and negative-going logic signals. And our low failure rates are unheard of elsewhere. Who else can give you all this?

Technitrol, Inc.

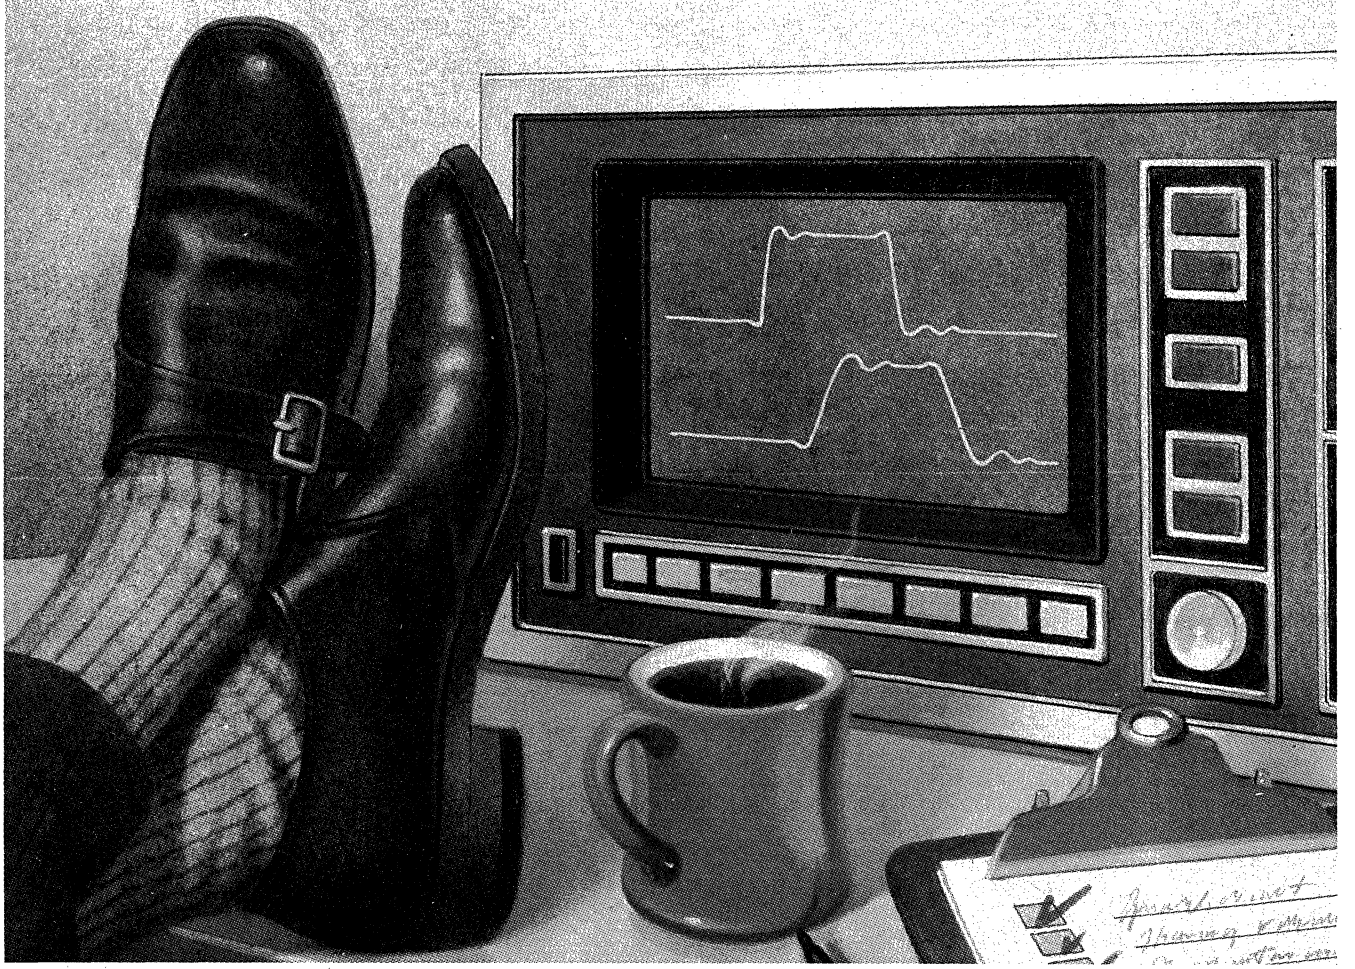
You'll find the same performance and reliability in all of our military- and commercial-grade products. Our toughest customers demand this. You should, too.

active and passive delay lines • pulse transformers • Manchester encoder/decoders • data bus couplers • pulse-width regulators • high voltage, Scott T, and ferroresonant transformers



eem selection guide — qualified products lists-2440

"Qualified Products Lists" are issued periodically by the U.S. Government as a guide for the procurement of electronic components by government contractors. Each list contains every separately designated part that has qualified under the latest Mil. Specification for its class and the name(s) of the Manufacturer(s) of each.

EEM is publishing the names of those North American companies that are qualified producers of one or more products in each of the lists that apply to a selected group of electronic products normally cataloged in these pages. Addresses for these companies will be found in the EEM yellow pages.

READOUT ASSEMBLIES

MINI-PAK DISPLAY ASSEMBLIES

The MINI-PAK® series are gas discharge or LED readout modules, specifically designed for use on low-to-medium volume industrial or commercial instruments. The display and associated electronic drive are packaged in a black thermoplastic case available in two styles; a rear panel mount and a front panel mount. The modules are available in 1½-, 2-, 2½ and 3-digit configuration that can be mounted individually or stacked horizontally to form any number of digits. The MINI-PAK® series are designed for direct interface compatibility with TTL or LSI integrated circuits with 4 line output information in the 8-4-2-1 BCD code format.

GAS DISCHARGE SERIES CE-1000/CE-2000

The MINI-PAK® series CE-1000/CE-2000 include a 0.55" high character gas discharge display and the BCD to seven segments Decoder/Driver. The interface terminals are brought out to 14 pin dual-in-line header or socket. All components are soldered to the P.C. Board.

GAS DISCHARGE SERIES CE-3000/CE-4000

The MINI-PAK® series CE-3000/CE-4000 include a 0.55" high character gas discharge display and socket mounted BCD to seven segments Decoder/Driver. The interface terminals are brought out to wire wrap pins. The gas discharge display can be very easily and efficiently replaced, thereby, minimizing down time.

LED SERIES CE-5000/CE-6000

The MINI-PAK® series CE-5000/CE-6000 include a socket mounted 0.43", 0.625" or 0.8" character high LED display, a socket mounted BCD to seven segments Decoder/Driver and current limitting resistors, whenever applicable. The interface terminals are brought out to wire wrap pins. The series is available with or without latch or in 5 mA, 15 mA or 20 mA per segment.

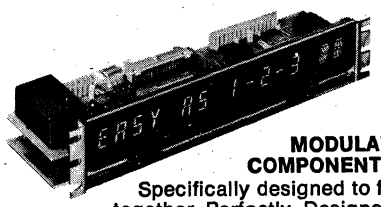
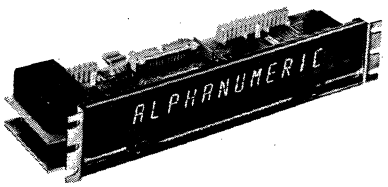
ALPHANUMERIC DISPLAY SYSTEMS



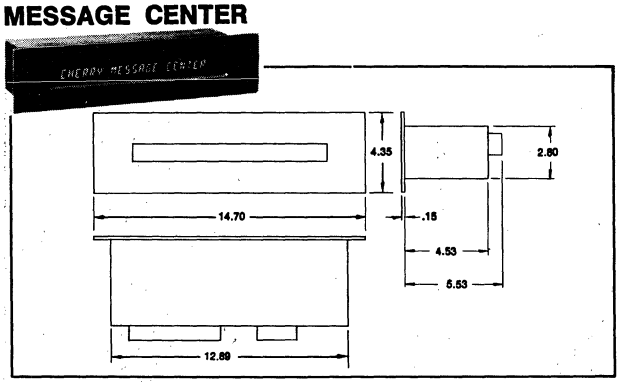
MODULAR COMPONENTS
Specifically designed to fit together. Perfectly. Designed so you can use each module alone . . . or put them all together.

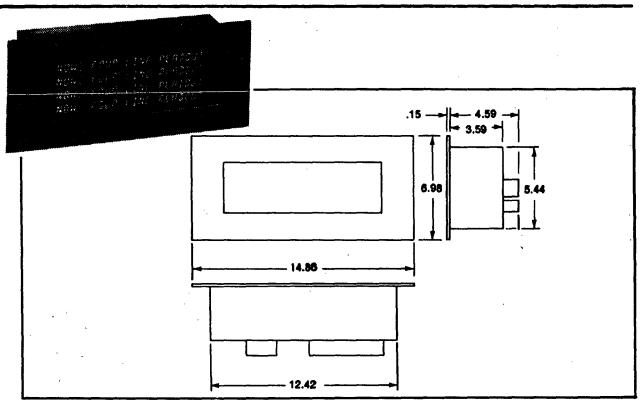
24 CHARACTER ALPHANUMERIC DISPLAY MODULE
A totally self-contained system. Complete microprocessor controlled circuitry includes drivers, character generator, refresh memory and provides all standard functions.

Result	Characteristics
W424-1051 . . . requires 12 VDC only and accepts parallel or serial input — serial in either RS232 or 20 ma current loop. Selectable baud rates.	Receives only, in parallel or serial.
W424-1053 . . . requires 12 VDC only and accepts parallel or serial input (RS232 or 20 ma current loop.) Selectable baud rates. Fully interactive with half and full duplex operation capability.	Receives in parallel or serial. Sends in serial only.
W424-1058 . . . requires 12 VDC only and accepts binary input, 6 bits and strobe.	Will output a total of 64 messages, each being as long as 32 bytes. User can program his own message EPROM (2716). Requires no ASCII code or serial input.



MESSAGE CENTER





- 24 Characters • Alphanumeric
- Receives serial or parallel ASCII output.
- Microprocessor Controlled

W424-105B — It displays up to 24 character messages in large half-inch bright orange neon 14 segment characters.

W424-105D — It can display up to 256 messages that have been stored in a nonvolatile, battery backed CMOS RAM.

W424-4040 — On a 4-line by 24 character display, the W424-4040 can show any of the 256 messages stored in the battery backed CMOS RAM memory. Each message may be up to 32 characters in length.

GAS DISCHARGE BAR GRAPH DISPLAY

The single wide bar graph is 10 inches long and is viewable at 50 feet. The elements are bussed together in a 5-phase arrangement for high brightness and provide for a flicker-free continuous appearing display.

Two separate graphs give continuous glow on precisely controlled bar lengths. The bars operate independently of each other because of separate connections. Each bar graph can be viewed from both directions at once, or from either direction. Two separate pieces of information can be viewed in each bar as long as the total elements do not exceed 201. Cathodes in each bar are bussed together in a 3-phase arrangement.

BASIC FEATURES

Bright, Uniform Characters provide a major advantage...particularly when the display is to be viewed at a distance.

Easily Driven— Uncomplicated drive circuits minimize overall cost. Dale can provide the "intelligence" including drive circuits required for various display packages.

Easily Customized — The special and/or personalized informative formats you wish to present can be provided at reasonable cost.

Aesthetically Superior — Soft neon glow provides exceptional contrast and reduces segmented appearance of characters.

DUAL LINEAR BAR GRAPH DISPLAYS

TYPES PBG-12201, PBG-12203, PBG-12205, PBG-16101

Dale dual linear bar graphs are flat panel plasma indicators each displaying two separate bar graphs. Depending on the model, they contain 101, 201 or 203 elements with resolution of ½% and 1%. At normal viewing distances, their glow blends into a continuous but precisely controlled bar length. The unique scanning technique minimizes the number of drives required.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

DIALIGHT LED CIRCUIT BOARD INDICATORS MEET YOUR NEEDS.

Dialight originated the idea of packaging LEDs for easy mounting on PC boards almost 15 years ago. So it's no wonder we now have the industry's widest selection.

Choose single-element LEDs in a wide range of voltages (with or without current-limiting resistors) or QUAD-LED® four-element arrays. We offer standard and high-efficiency LEDs, as well as new super bright models that are 4 times brighter than ordinary LEDs but operate on a fraction of the power.

We have just the right color for your application, too. Red, green, yellow or red/green bicolor. The combinations are virtually limitless. That's why your search for the perfect LED circuit board indicator should begin and end with the company that started it all and has been lighting the way ever since. Dialight.

DIALIGHT LED CIRCUIT BOARD INDICATORS

A North American Philips Company

DIALIGHT INDICATOR LIGHTS MEET YOUR NEEDS.

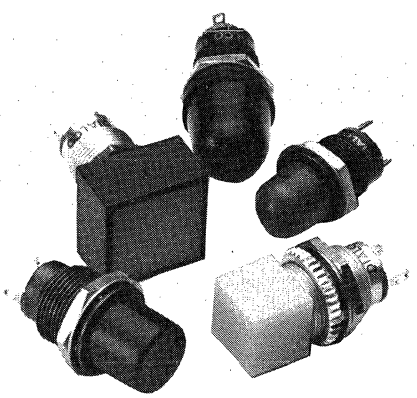
Whatever your application calls for in indicator lights, Dialight has your number. Over 1,500,000 to be exact. That's how many different types of indicator lights we offer. One is bound to meet your specs and needs perfectly.

Take our ultraminiature incandescents with plug-in cartridges for example. They come in enough colors to simplify even the most complex front panels. And they make changing lamps a snap. Dialight LEDs, on the other hand, have a service life of over 100,000 hours. We also offer indicators with built-in RFI/EMI shields, open types, as well as watertight, oil-tight and press-to-test models. You'll also be happy to know that all our indicator lights meet or exceed military specs.

ULTRAMINIATURE LED, INCANDESCENT OR NEON INDICATORS—DATALITES®

Replaceable plug-in cartridges for 1.35-125V operation. U.L. listed and CSA approved. Indicators mount in 9/32″, 3/8″ and 3/4″ (twin lamp) clearance holes. Meet or exceed MIL-L-3661. Available with red, green, amber, blue, white translucent, light yellow or colorless lenses. Wide range of lens shapes. Custom legends.

SUBMINIATURE INCANDESCENT OR NEON INDICATORS

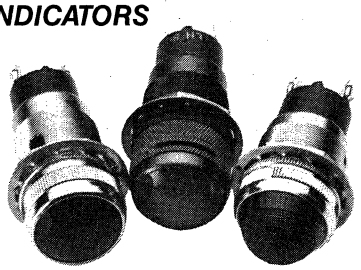


Meet or exceed MIL-L-3661. U.L. listed and CSA approved. Mount in 15/32″, 1/2″ or 17/32″ clearance holes. Incandescent for 1.35 to 28V; neon has built-in current-limiting resistor. Choice of cylindrical, faceted, convex, flat, square and round lens shapes. Custom legends.

MINIATURE INCANDESCENT OR NEON INDICATORS

U.L. listed and CSA approved. Meet or exceed MIL-L-3661. Mount in 9/16″ and 11/16″ clearance holes. Voltages range from 2 to 120V. Available in red, green, amber, blue, white, yellow or colorless lenses. Full range of finishes.

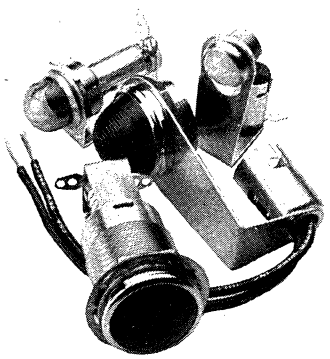
LARGE INCANDESCENT OR NEON INDICATORS



DIALIGHT INDICATOR LIGHTS MEET YOUR NEEDS.

Mount in 1″ clearance hole. U.L. listed and CSA approved. Meet or exceed MIL-L-3661. Incandescent for 2 to 250V; neon has built-in current-limiting resistor. Screw-on or friction-fit lens caps. Bayonet lock caps also available. Mechanical dimmer caps or light shield lens cap available on some models. Choice of flat, convex, torpedo, large torpedo, faceted, torpedo faceted or dome lens shapes.

OPEN TYPE INDICATORS

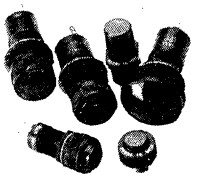


Mount in 7/16″, 11/16″ or 1″ clearance holes. 2 to 250V models available depending upon series. Tamper-proof construction is available. Choice of flat, convex, faceted, stove-pipe or cylindrical lens shapes.

OIL-TIGHT INDICATORS

U.L. listed and CSA approved. Three retained elastomer seals of inert material, consisting of a gasket and two "O" rings, make these indicator lights resistant to permeation by oil, water, dust or fumes. Thus, assuring high reliability in harsh environments. Subminiature and miniature incandescent and neon lamps mount in 15/32″ and 11/16″ clearance holes. Large incandescent and neon lamps mount in 1″ or 1-3/16″ clearance holes. Available in red, green, yellow, blue, white translucent, light yellow and clear colorless. Positive or negative film discs with words, numerals or letters may be ordered for use with some models. Wide range of voltages and specifications available.

PRESS-TO-TEST INDICATORS



Positive safety factors are provided by patented built-in Press-To-Test indicators. Lamps can be checked instantly and accurately without removing them from their assembly. 4-terminal assemblies are available with all indicators and are particularly useful for remote applications. Subminiature, miniature and large Press-To-Test indicators are available for mounting in 15/32″, 5/8″ and 1″ clearance holes respectively. Choice of red, green, yellow, blue, white translucent, light yellow and clear colorless lens colors. Patented shutter-dimming device available on most models. Hot-stamped or engraved legend can be supplied on flat lenses. Meet or exceed MIL-L-7961B and MIL-L-3661. QPL approval.

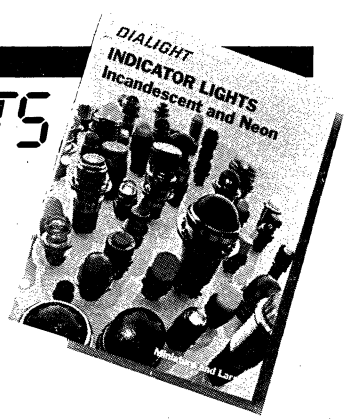
DIALIGHT INDICATOR LIGHTS

A North American Philips Company



DIALIGHT LED READOUT DISPLAYS MEET YOUR NEEDS.

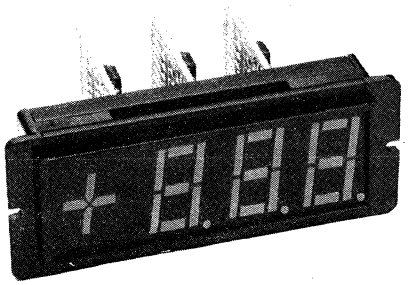
Dialight offers three basic types of LED readout displays: complete assemblies, modules and bezel kits, and discrete readouts. All are excellent choices where power is a limiting factor and IC compatibility, ultra reliability and packaging density are prime requirements.

Readouts come in a variety of sizes, ranging from .270″ to .600″ in character height. Available styles include: 7 segment, hexadecimal, alphanumeric and custom symbols.

Typical viewing distance, in normal ambient, ranges from 10 to 25 feet, with brightness a current variable. Special Dialight filters provide excellent character enhancement, permitting use in higher illumination environments (excluding direct sunlight).

Because Dialight readout displays are virtually immune to shock and vibration, they're particularly valuable in rugged applications. Their solid-state construction offers life measured in years.

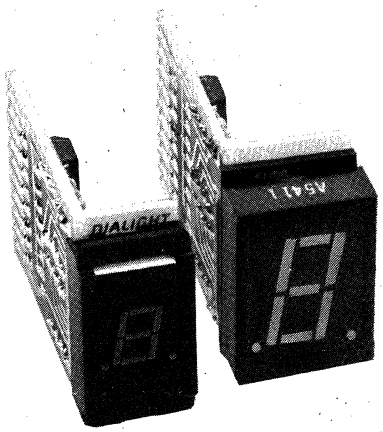
COMPLETE LED ASSEMBLIES



Complete assemblies significantly reduce the design time and cost normally associated with mounting and driving displays. They come complete with readouts and drivers mounted to PC boards in a bezel, making panel mounting easy. They also require only a 5 or 12 VDC power supply and BCD inputs. And they can be wired directly or by using edge-card connectors.

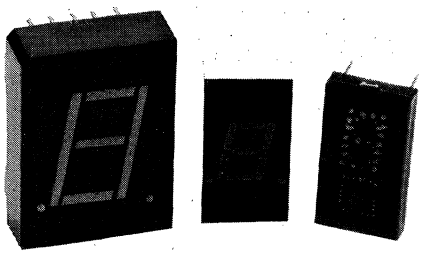
Attractive and bright, these LED readouts have non-glare windows to further enhance visibility. Each assembly is available with anywhere from one to 20 digits or status indicators. Character size ranges from .270″ to .600″ in height. To further increase design flexibility, drive circuitry is available with optional latch or counter. Also available with hexadecimal decoder with latch and CMOS decoder with latch. In addition, polarity indicators are an option. And optional spacers or specialty status symbols can be accommodated for custom assemblies.

LED MODULES



The same modules used in Dialight complete assemblies can be ordered separately, along with easily assembled bezel kits. This allows users to make their own custom displays with a minimum of parts, money and effort. Modules are also available in panel mount types for use without a bezel.

DISCRETE LED READOUTS



Discrete readouts are available in .270″, .300″ and .600″ character heights. Choose from seven segment, hexadecimal with integral drive circuitry and alphanumeric styles. Each readout offers high brightness with a wide viewing angle. Standoffs also allow for easy flux removal from PC boards after wave soldering.

DRIVE LOGIC NOTES

The 68X32 & 68X33 Series use SN7448 (TTL) or 4511B (CMOS), BCD to 7 Bar decoders which drive ULN2003A, 7 channel darlington drivers.

The 68X36 Series employs the same decoders and drivers as the 68X32 & 68X33 Series. For added reliability, these are arranged in a dual-parallel circuit with each decoder-driver powering half of the lamps that light each segment.

As with all CMOS devices, options with user driven inputs must be switched high or low during operation.

The logic supply current for TTL options is 55ma, typ., per digit except for the 68X36 Series and the 68X31 Series with J lamps where 110ma per digit is required.

* *With CMOS logic options, the display will blank if the BCD input is greater than 9.*

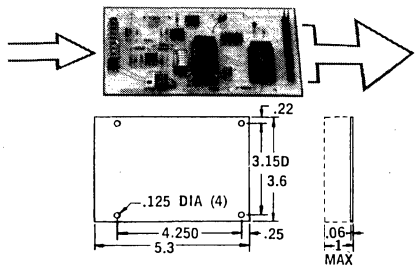
820 SERIES SERIAL ASCII INTERFACES



The DIO-REY 820 Series Serial to Parallel and Parallel to Serial Converters are microprocessor based and are primarily intended for driving remote display decoders.

The input to the 820 Receiver is a Serial ASCII coded data stream at either RS232 or current loop levels. The 820 Receiver automatically adapts itself to incoming data rates over the range of 110 to 1200 baud. In addition it features a six position DIP switch which allows selective addressing of up to 64 separate receivers on one data link. The output of the receiver is six bits of data and sixteen strobe lines. The receiver, therefore, can drive either sixteen numeric or alphanumeric displays per receiver or up to 96 points in an annunciator system.

The 820A Transmitter accepts parallel, 7-bit ASCII (monocase) and converts it into a serial data format (RS232 or current loop) compatible with the receiver. Alternately, an array of sixteen, 6-bit registers may be sequentially inputed to the 820B Transmitter and converted to the same serial output, for annunciator systems.

Part Number	Interface Code	Description	Transmission Mode
820-1	—11	Serial ASCII Data Receiver	EIA RS232

LAYOUT SHEET FOR DIO-REY 82000 SERIES LIGHTED INDICATORS

Units which combine two or more of the standard module sizes can be supplied in attractive, integrated assemblies. To determine the assembly that will meet your requirements, just follow these steps: 1 — List the information (Words, Numbers, Letters, Symbols, etc.) to be displayed and then lay it out on a 3/8" square grid. (A vellum or onion-skin overlay on the grid pattern printed on this sheet may be helpful for this purpose.) 2 — Choose lighted legend or lighted background for displayed information. 3 — Select the module sizes that will meet your display requirements and block them in on the layout. If you need a larger lighted area than is available from a single module, combine modules. 4 — Add a 1/8" bezel around the light module layout to obtain the overall appearance of the display unit. 5 — Choose the color(s) for the lighted areas. 6—Choose a LED/lamp, considering Power Available, and Ambient Light Intensity from Table 2, Page B•1041. At this point, or if applications engineering assistance is required earlier, contact our office or your area representative.

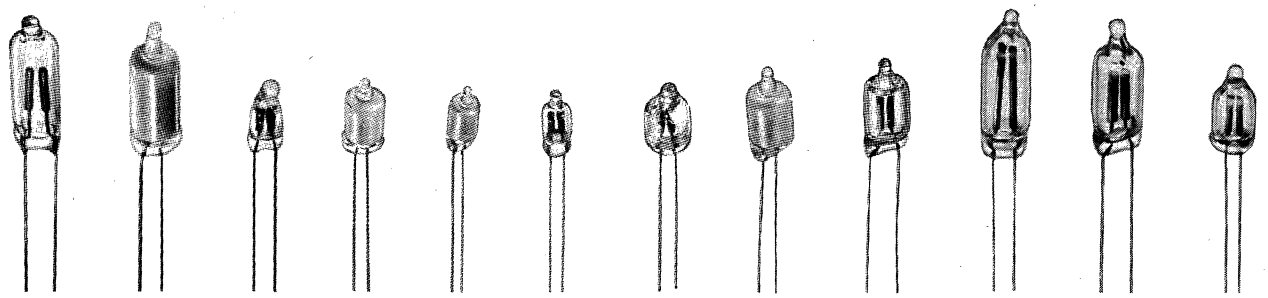
Neon Glow Lamps

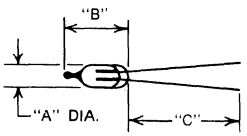
Neon lamps are ideal for line-voltage AC as well as for 90V and up DC applications. They are rugged and long-lived; properly specified neon lamps will outlast the equipment in which they are incorporated.

IDI 4900 series neon lamps have tinned leads, and are ideal for use on printed circuit boards. Unique sizes, colors, and voltage characteristics provide a wide range of options.

Plain glass lamps include both standard brightness and high brightness types, and include a unique high-current lamp for greater light output and a unique high brightness low voltage lamp. Green, blue, and amber lamps have a phospher coating on the inside of the glass envelope to convert the typical orange-red neon glow to other colors, and are available in both miniature and sub-miniature sizes.

A wide variety of complete panel-mounted neon indicator lights is listed in the "non-relampable" section of this catalog. Several PC Board-mounted neon assemblies are in development; please let us know if you have specific needs.





(SEE TABLE FOR DIM'S)

NOTES: 1. Leads are Tinned.
2. DC life is 60% of AC life.
3. All lamps must be ballasted.
4. All lamps may be used on higher voltages with appropriate value resistor in series.
5. Max. firing voltage when lamp is new, for high brightness lamps voltage increases as lamp ages.
6. Voltage measured across lamp at design current.

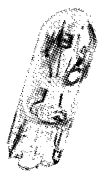
Tiny-Mite™



FEATURES

- Attractive
- Compact
- Easy lamp insertion and removal
- Economical

TINY-MITE indicator light assemblies and sockets feature a unique socket construction which holds the lamp securely, makes contact reliably, and will not loosen with vibration or shock, yet permits easy lamp removal and replacement.

TINY-MITE 4600 Series indicator light assemblies are extremely attractive, rugged, and reliable, yet utilize minimal panel space. TINY-MITE 4100 Series sub-miniature wedge-base lamp sockets are available in both lead and solder terminal versions, as well as in a printed circuit board version.

Sub-miniature wedge-base lamps evolved from the design originally developed for miniature (T-3-1/4) lamps. The ruggedness and reliability of wedge-base lamps has been proved by the annual use of hundreds of millions of units. Wedge-base design is economical because the base is formed from the glass of the bulb and lead-in wires. There are no separate parts or extra welded connections. There are 13 different types presently available with voltage ratings ranging from 2.5 volts to 28 volts.

Non-Relampable Indicator Lights

IDI non-relampable, or unit-construction, indicator light assemblies are compact and attractive. They are essentially tamper-proof and have outstanding reliability due to the elimination of sockets and spring contacts. In addition, IDI non-relampable indicator light assemblies are extremely economical to buy and install.

GENERAL PURPOSE INDICATOR LIGHTS

- Available in five lens shapes and two body sizes.
- Neon models incorporate appropriate current-limiting resistors.
- A choice of wire leads or quick connect terminals.
- Lights can be easily mounted by either push-on speednut or snap-fit into a .500 (12.70) dia. hole.
- UL Recognized — CSA Approved.

Rugged and long-lived, OMNI-GLOW Indicator Lights usually outlast the product on which they are used. Conservatively rated, the neon lights will function in excess of 10,000 hours — and often much longer. Depending on usage, the incandescent models can also provide outstanding performance. Tamper-proof housing and elimination of sockets and spring contacts — along with intrinsically rugged shock-proof design — all combine to provide outstanding reliability.

OMNI-GLOW Indicator Lights are compact and economical. They take little space on your panel or behind it and make modest demands on your budget.

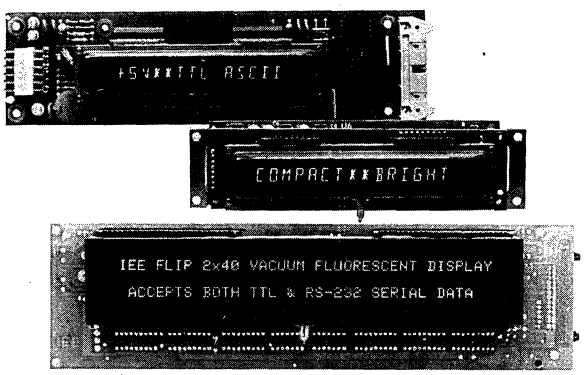
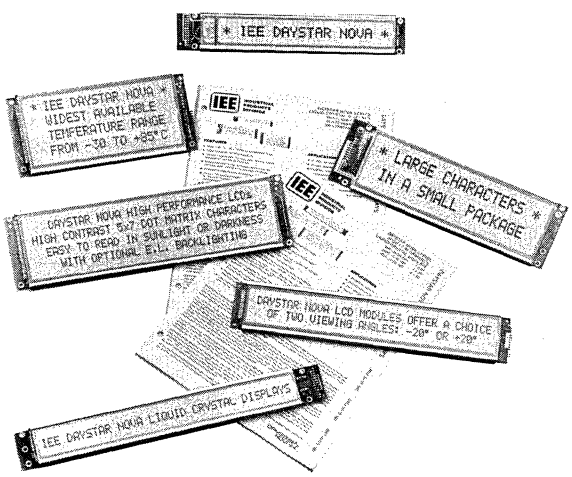
THE ARGUS™ GAS PLASMA FAMILY
PEP™ INTERACTIVE TOUCH DISPLAY

These compact DC plasma display modules, some with interactive capabilities, revolutionized the industry. They utilize neon-orange or green 5x7 dot matrix plasma panels and integrated electronics to produce bright, easy to read alphanumeric characters. Standard U.S. ASCII and several European ECMA font sets are available; optional custom programmed font sets can also be provided. Multiple lines (2, 4, 6, 8 & 12) of 16, 20, 32 and 40 characters per line are standard with character heights of .21, .26 and .33 inches. A simple TTL level ASCII interface scheme is utilized. Most models contain on-board control, memory, and refresh electronics, further simplifying the interface task. Data rates of 40,000 to 750,000 characters per second are possible depending on the model and interface method chosen. Careful attention has been paid to packaging design, resulting in very compact modules. ARGUS display life normally exceeds 30,000 hours, depending on application and environment. A wide range of accessories, including filters, power supplies, and serial data converters round out the current ARGUS Family. Low cost, "minimum logic" ARGUS MPX™ modules compatible with competitive product lines are also now available. The new ARGUS AIM™ full-logic modules use convenient 8-bit bus interfaces and require only low-voltage power supplies. On the drawing board now is a range of "full-dot" graphic models.

THE FLIP™ VACUUM FLUORESCENT FAMILY

These vacuum fluorescent display modules feature bright (100fL) blue-green characters filterable to blue, yellow, green or red. A wide variety of models use a 5x7 or 5x12 dot matrix format to display alphanumeric data along with European, scientific or custom characters. For low-cost applications 14-segment models are available, which display upper case characters. Single and multiple line displays are available with character heights ranging from .2" to .59". All FLIP modules operate on +5VDC only, and most are less than 1" deep. Each unit has a self-contained microprocessor and accepts both serial and parallel (8-bit bus) ASCII data. A number are drop-in replacements for competitive products and several are priced at under $100 in production quantities. Models available offer fields from 10 to 240 characters. The FLIP Family's latest additions are a line of extended temperature range models which operate from −40 to +85 °C (−40 to +185 °F). New models are frequently added to this growing and compatible line.





THE DAYSTAR NOVA™ LIQUID CRYSTAL FAMILY

Members of IEE's newest and fastest growing alphanumeric family, these low power, compact Liquid Crystal Display Modules are ideal for battery-operated portable equipment, especially when sunlight readability is a must. Models currently available range from one line of 16 characters to four lines of 40 characters. These ASCII modules interface easily to a 4 or 8-bit data bus; an RS-232 serial data converter card will be available shortly. Our new, unique-to-the-industry DAYSTAR NOVA line features extra-large (.33 inch to .5 inch) characters, a wide operating temperature range (−30 ° to +85 °C), and optional electroluminescent backlighting for night viewing. They operate on a single 5V power supply.

Most Infodex OEM displays are supplied as compact one piece assemblies, without enclosures, for direct installation behind control panels. Screens up to seven inch diagonal are typically flat face, and include both magnetic and electrostatic deflection amplifiers, video amplifiers, and high voltage power supplies. The only connections needed to use circuits are low level video and sync inputs, or X and Y deflection signals for random access displays. Units may be supplied to operate from 12, 15, 24, or 28 Vdc sources within user equipment, or from 110/220 Vac.

Custom displays may be variations of standard designs to provide special electrical or mechanical features, including repackaging to fit unusual or restricted spaces. Even completely new custom designs enjoy a head start based on our experience in solving CRT display problems for an extremely wide range of applications.

In military and medical applications, there can be no tradeoff on reliability, yet continuous operation is common at elevated temperatures and high humidity, and technical maintenance is often unavailable on site. Some techniques we have developed to deal with these hostile environments include:

- Sealing and encapsulating high voltage components to permit safe operation under conditions of 100% humidity, *with* condensation.
- Mechanical designs that can support tubes and deflection yokes to prevent damage or misalignment by severe shock and vibration.
- EMI shielding through the CRT faceplate, combined with optical filtering to enhance contrast in high ambient light conditions, while simultaneously avoiding fog due to condensation at 100% humidity, and permitting easy field replacement.
- Functionally separate replaceable modules that are designed for safe, easy fault isolation and fast replacement in the field.
- Diagnostic output signals that indicate normal conditions within the equipment, or the presence and location of a fault.

The MIL-I-45208 level of 9858 Quality Assurance Program is in place, and we have quality assurance facilities to support all MIL SPEC production. All models conform to applicable EIA and ARINC standards, and are designed to comply with UL requirements, or to facilitate obtaining UL approval.

INFODEX FACILITIES FOR CRT DISPLAY TESTING

Infodex test equipment includes specialized generators that can provide a wide range of input signals as well as standard EIA test signals. Light measuring instruments permit accurate measurement of peak and average luminance, spot size, line width, contrast ratio, and modulation transfer function in accordance with accepted standards.

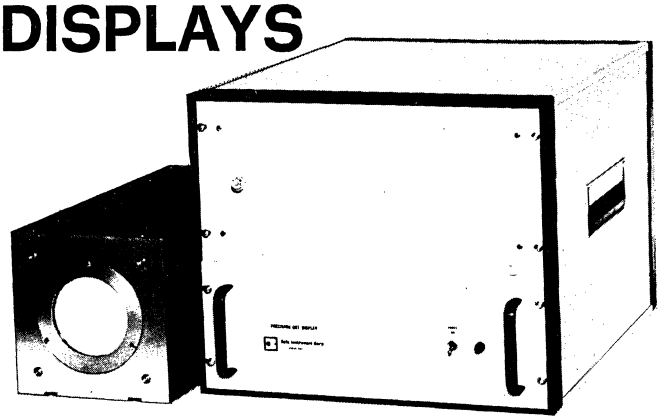
INFODEX DISPLAYS ARE COST EFFECTIVE

Standard models and standard subassemblies are kept in inventory, and can be quickly assembled or modified for fast delivery. Many designs have already been environmentally tested. Many special designs have already been delivered to users in production quantities.

THE RESULT

Infodex customers get reliable, proven CRT displays that can meet all applicable specifications, in less time and at lower cost than in house designs.

PRECISION X-Y CRT DISPLAYS



Infodex Precision CRT Displays are high performance X-Y displays that combine high resolution with accurate deflection, fast settling, and high stability. They are used in precision display applications such as:

- Film recorders and hard copy recorders
- Precision radar and sonar displays
- Computer output graphics displays
- Flying spot scanners
- Precision television monitors

PD series displays use magnetically deflected flat face cathode ray tubes with small deflection angles to achieve small spot size with minimum geometric distortion. Spot growth is minimized by dynamic focus, and electronic linearity correction is used to improve deflection accuracy and minimize pincushion distortion.

The displays are capable of random access X-Y deflection precisely proportional to X-Y input voltages (±5V full scale) at all rates from dc to the maximum specified bandwidth. Options include sawtooth and raster generators and PPI (rho-theta) generators for internal generation of deflection signals.

Spot intensity is controlled by separate unblanking (on/off) and video (analog) inputs. Options include phosphor protection circuits that blank the spot whenever writing speed drops below an adjustable minimum value, and gamma corrected video amplifiers that linearize the relationship between video signal amplitude and spot intensity.

PD displays consist of separate CRT and electronics assemblies that may be located several feet apart. The CRTs thus may be separately mounted in display panels, in camera or recorder structures, or other locations with restricted mounting space. The electronics assemblies are rack mounted chassis that contain low and high voltage power supplies, magnetic deflection amplifiers, video amplifiers, and low level correction and linearization circuits. An attractive metal cabinet is optionally available (see figure).

PRECISION DISPLAY COMPONENTS

High voltage supplies, deflection amplifiers, video amplifiers, linearization circuits, and precision adjustable tube mounts are separately available for OEMs who integrate precision CRT displays into their end products.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

SIGNALEX®

HIGH VISIBILITY DISPLAYS

ENERGY-SAVING: Electromagnetically-operated Signalex displays require no power to maintain continuous indication. Inherently bi-stable, Signalex displays draw power only at the instant of change.

INHERENT MEMORY: Indication is maintained even with loss of power.

DIRECT ACCESS: Signalex displays can change from one number to any other—without a run-through of numbers. The unit immediately displays the transmitted number.

LOW MAINTENANCE: The rugged Signalex design assures long life and dependability. With no bulbs to replace, they are virtually maintenance-free.

HIGH-VISIBILITY: Signalex displays can be used indoors and out, in temperatures ranging from -40°C to +75°C. Their light-reflecting segments give high visibility in bright ambient light.

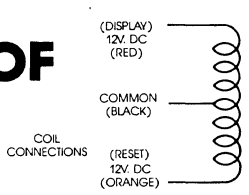
Temperature: -40°C to +75°C.

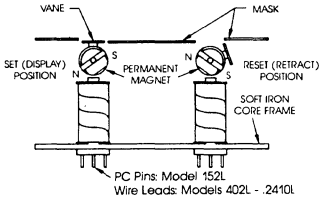
Relative Humidity: Up to 95% R.H. at any temperature in the range, provided no consideration present.

Power to Maintain Display: NONE

Vane Colors: White, Saturn-Yellow, Orange-Red Fluorescents. Black background standard. Other high-visibility colors available.

PRINCIPLE OF OPERATION





Signalex® displays operate on a well-proven electromagnetic principle. A short pulse in a coil produces a magnetic field that acts upon a permanent magnet located in a rotor, part of which is the vane itself.

The magnet is either attracted or repelled, turning the rotor and vane with it. In either display or reset position the magnetic circuit is stable so that the vane can remain in either position with no power in the coil. The permanent magnet pole is attracted to the soft iron core which will hold the vane in position until a reverse pulse is passed.

The rotor and magnet assemblies are the only moving parts in the display. Their light weight and low inertia give fast response time. High lubricity plastic bearings are used.

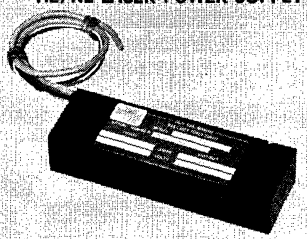
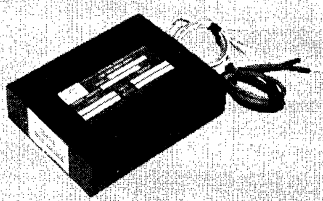
HE/NE LASER POWER SUPPLY



MODEL L23

Many shapes and sizes of this very compact supply are offered to fit a large variety of instrument packages. Numerous options are available, including an inhibit circuit to replace electro-mechanical relays for BRH compliance. Switching mode regulation provides exceptionally high efficiency while operating a plasma tube with a regulation of ± 1 mA. The high efficiency allows operation with a minimum of heat sink and a minimum of heating within an instrument, increasing the life of heat sensitive components.

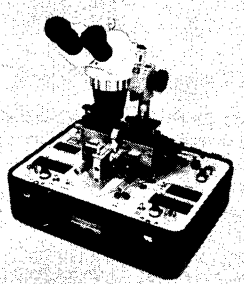
HE/NE LASER POWER SUPPLY



MODEL L92

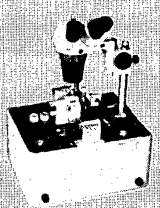
Features of this product include isolation of the laser tube or leads from the AC line, operation from either 115 or 230 VAC by switching one lead, switching mode current regulation for high efficiency, and power output of 5 to 18 W. The L92 is housed in a molded fiberglass case, and fully potted for maximum protection from dust and moisture. Size: 1.15 x 3.30 x 4.25" (29.2 x 83.8 x 108 mm).

The Model L45 same as Model L92 except case dimensions. Contact P.T.I. for further information.



PFS-300 SERIES OPTICAL FIBER SPLICER

Operating from internal batteries or from a variety of external power sources, the PFS-300 Series splicers are ideal universal instruments in the laboratory, out in the field during installations and repairs, or as part of a production line. The combination of ruggedness and rigidity that makes this splicer so versatile has many important ramifications, particularly in the field of single mode lightwave transmissions.



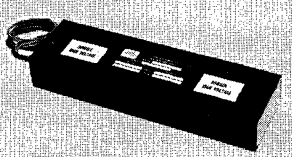
MODEL PFS-240 OPTICAL FIBER SPLICER

Featuring a modular stereo microscope and sturdy aluminum case, P.T.I.'s Model PFS-240 provides high level splicing performance, convenience, ease of operation, and ruggedness.

The stereo microscope will satisfy the most critical requirements for high-quality 3-D magnified images. With objectives 2X-4X as standard, rotation of a knurled ring selects either 40X or 80X. A lense attachment of 1.5X allows magnification of 60X to 120X.

Stereo zoom microscope, with magnification of 14X to 90X, provides large flat fields of view, crisply resolved. By rotating a knurled ring, magnifications are variable. A 1.5X lense attachment will allow magnification of 21X to 135X.

With the added features, our PFS-200 basic design is maintained. See inside page for specifications.



40 AND 75 W HeNe AND CO_2 LASER POWER SUPPLIES

TRW OPTALIGN* Fiber Optic Connectors

Model MM (Multi Mode)
Model SM (Single Mode)

Directly applicable to computers, telecommunications, cable television, medical, instrumentation and military requirements, TRW fiber optic connectors provide state-of-the-art advances in reliable coupling of optical fibers.

TRW OPTALIGN Connectors provide precise, stable and repeatable connections. Typical insertion losses are 0.2 dB for multi mode; 0.8 dB for 4/80 single mode fiber; 0.3 dB for 8/125 single mode fiber, depending on the quality of the fiber being used.

TRW OPTALIGN Connectors employ the patented all-glass alignment guide. This guide is curved and permits entering fibers to meet deep within one of the vee-shaped grooves. This inherent self-aligning characteristic provides excellent shock and vibration immunity.

TRW OPTALIGN Fiber Optic Connectors provide a clean, chemically inert protective enclosure for optical fibers. They even accept fiber diameters that might be at opposite tolerance limits. Because of the alignment element within the connector, close tolerances for the connector envelope are not required to achieve low losses. The result is lower connection cost.
